

PHYSIOlick PEACE

Why use PHYSIOlick PEACE?

PHYSIOlick PEACE is a specific mineral licking bucket for ruminants. It contains minerals, trace elements and vitamins necessary to complement rations based on forage. Thanks to specific plant extracts PHYSIOlick PEACE contributes to the well-being of the animal in case of high presence of insects.

Product benefits

- Contains garlic extract which makes the sweat to repulse the insects.
- Contribute to meet the dietary requirement of the animals.
- Support feed efficiency.

Composition

| MINERALS (%) | | TRACE ELEMENTS (mg/kg) | |
|------------------|---------|------------------------|-------|
| Phosphorus | 3 | Zinc | 5 000 |
| Calcium | 9 | Manganese | 4 000 |
| Magnesium | 5 | Copper | 60 |
| Sodium | 4 | (chelate of glycine) | |
| Sulphur | 1 | Iodine | 100 |
| | | Cobalt | 50 |
| | | Selenium | 50 |
| | | Molybdenum | 10 |
| VITAMINS (UI/kg) | | OTHERS | |
| Vitamin A | 200 000 | Plant extracts | |
| Vitamin D3 | 40 000 | | |
| Vitamin E | 1 000 | | |

Sugars: 14%

PHYSIOlick advantages

- PHYSIOlick is made by an original process where the product is poured without heat or pressure. This gives PHYSIOlick better palatability, greater resistance to bad weather and a consistent texture.
- PHYSIOlick is practical and easy to use.
- PHYSIOlick contains efficient trace elements in organic form, cupric chelates of glycine, these have a 2 to 3 times higher absorption rate.
- S.U.R nucleus composed of soluble minerals and trace elements necessary for the rumen micro-organisms to improve feed efficiency and intake.
- PEP'S formulation allows a lower phosphorus content by taking into account the real digestibility value and includes specific phosphates.
- CALYPAC is an exclusive and patented sealing system which insures perfect preservation of the product (only for 25 kg buckets).
- High content of sugar which contribute to the rumen microorganism activity all day long.
- Molybdenum to prevent copper intoxication of sheep by forages and feeds and cupric chelate to cover the copper requirement.

25 kg
or 125 kg tub

Instructions for use

Remove the CALYPAC film and leave buckets where animals congregate:

- 10 bovines per 25 kg bucket (30 per 125 kg tub), estimated consumption 100 to 150 g/day/head.
- 25 goats or sheep per 25 kg bucket (100 per 125 kg tub), estimated consumption 25 g/day/head.

Remove the bucket if sheep take more than 200 g per day. Clean water must always be available. Contact your ruminant technician for a specific recommendation.
